# Registering and Creating Presentations on prezi.com

*Fayziyev Nozim Asfandiyorovich*[1]
*Toxirqulov Zufar Jurabek o'g'li*[2]

**Abstract**

The article discusses the effectiveness of teaching "Information technologies in education" in higher education institutions. In the teaching of this subject, it is intended to clearly show the process of organizing the lesson and explaining it using multimedia tools.

Keywords: Prezi.com, Prezi, Google Chrome, Sign up, Learn more, Individual, Students & Educators, Business, EDU Plus, EDU Pro and EDU Teams.

Above, we saw you working with the Prezi program offline, that is, without the Internet. Now we will see how to create a presentation online, that is, on the Internet, on Prezi.com. For this we need to

register from the site first. To register from Prezi.com, we use the Google Chrome browser. From the browser, we enter the official site of the company, Prezi.com (Fig. 1).

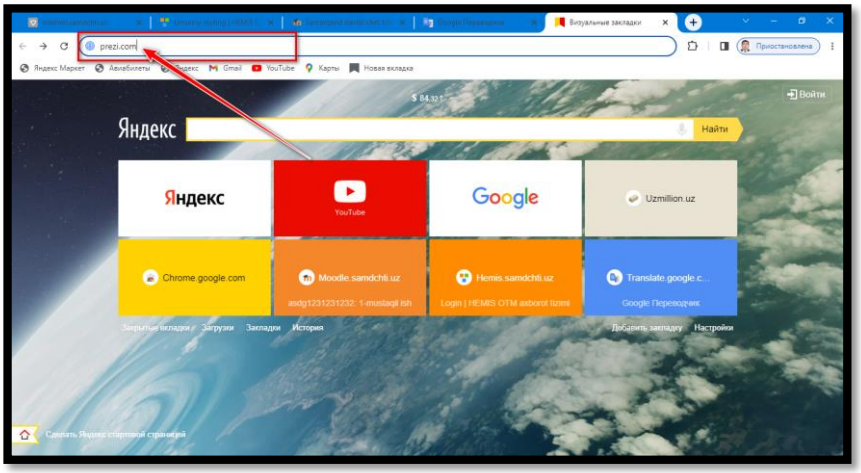

**Figure 1. Writing a site in a browser**

In order to enter the company's official site Prezi.com from the browser, we need to type in the place indicated by the red direction symbol in the picture above, and as a result, the window of the Prezi.com site will open. Here, when we enter the site, the **Sign up** and **Learn more** buttons are on the window. If we have logged in before, click the **Learn more** button, if we are logging in for the first time, we will have to click the **Sign up** button. From here we select the **Sign up** button for our first login.

As a result, when entering information in the window that opens, you need to come up with your name, surname, e-mail address and a completely new password. After entering all the information correctly, press the Continue button to proceed to the next step. In this window, there are Individual, Students & Educators and Business buttons, since we are students, we select the Students & Educators button from these and go to the next step (Figure 2).

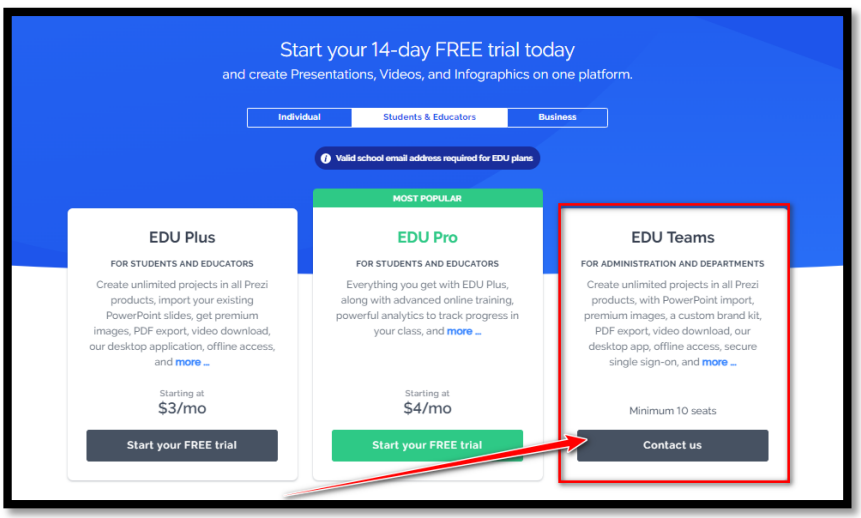

**Figure 2. Choosing EDU Teams**

At the bottom of the window in Figure 2 are the **EDU Plus**, **EDU Pro**, and **EDU Teams** types. We will select the **EDU Teams** type as it is free of these and proceed to the next step.

One of the advantages of the Prezi program is that we can work alone, that is, one person, or we can work as a team on the presentation of a project. The above window will ask for the same and since we are working on this ourselves, we will select the **Skip** button. If you press the **Skip** button from the window above, the window below will open again. In this window, there are **Business, Student, Educator** and **Other** items, we choose the one that suits us, that is, the **Student** item (Fig. 3).

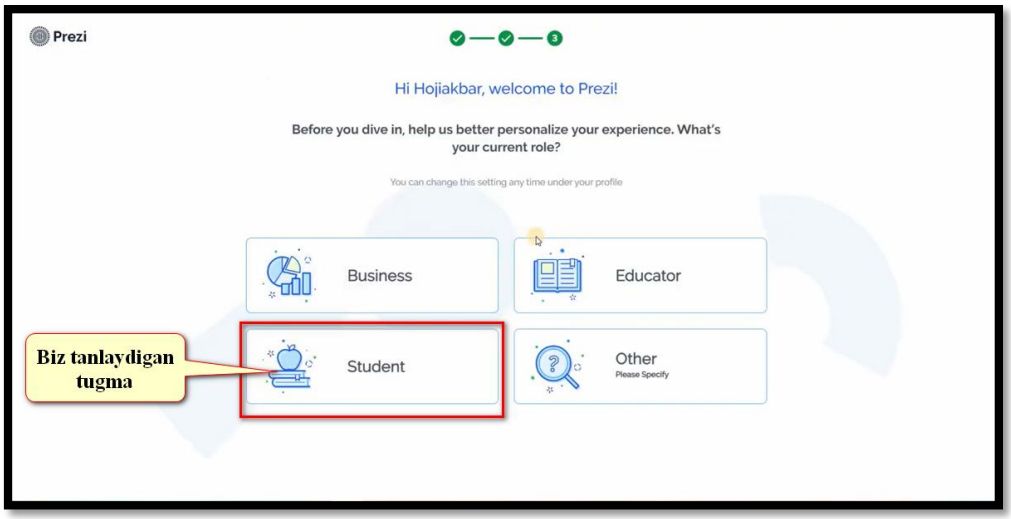

**Figure 3. Choosing a student item**

The purpose of selecting the **Student** item from this window is that the templates and designs presented to us are all tailored to students. The **Business** section contains business-related templates and designs, and the **Educator** and **Other** sections also contain unique templates. After selecting the **Student** item, a notes window will open on the screen.

There are 4 menus in the above window, namely **My Dashboard, Analytics, Learn** and **Support** menus. We select the **My Dashboart** menu from these. These processes are the steps of registration on the site, and after it is completed, the window will open again. In the main window of creating a presentation, there are side menus on the left side. After opening the **Prezi Present** menu, there are 3 sections in the window: **Create from template**, **Start from scratch** and **Convert PowerPoint sections**. All of these create a presentation, but in three different ways:

You can add information to it using ready-made presentation templates in the **Create from template section**;

There are no templates in the **Start from scratch section**, you can create a presentation yourself by creating templates, giving them shapes, changing their colors and entering information;

The **Convert PowerPoint section** also has ready-made templates so you can convert your ready-made PowerPoint file into a Prezi presentation file.

Now we will see how to create a presentation using a ready-made template. For this, we go to the **Create from template** section shown above. As seen in the presentation creation window, all the forms that appear in the top left side menu and the main screen are ready-made templates. We can choose any of these templates (Figure 4).

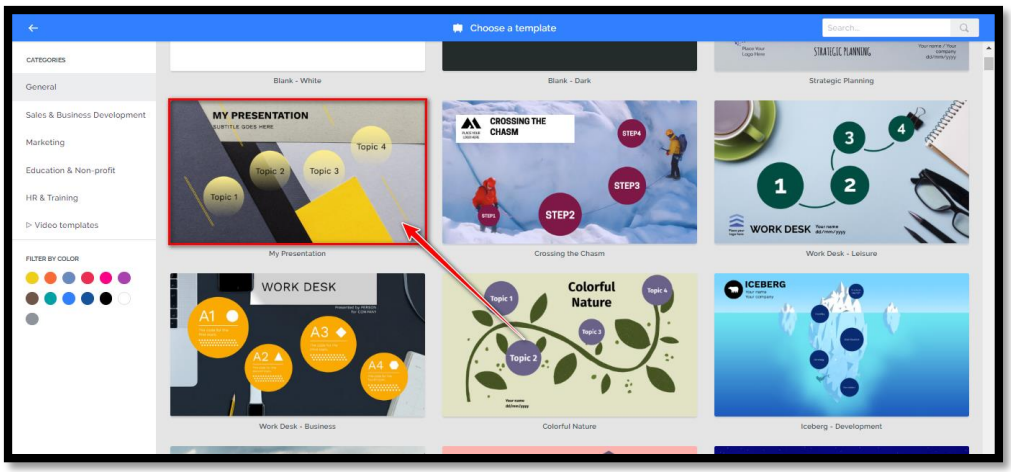

**Figure 4. The process of choosing a ready-made template**

From the selected template, click the **Use this template** button, and in the window that opens, give a name to our presentation in the Name the presentation section. After writing a name in the presentation name box shown in the presentation naming window, you will be asked to select one of the **People I share it with** and **Anyone on the web** buttons next to it, and we will select **Anyone on the web**. When we select the (everyone on the Internet can see) button, we start creating a presentation by pressing the **Continue** button

After completing the above processes, the following window will open. We can write our own information by changing the template entries that appear in this window (Figure 5).

**Figure 5. Presentation template window**

From this window, referring to **Topic 1**, we write our information. When I enter information in **Topic 1**, if we need additional windows, we can click the green **Subtopic** button located in the upper left part of Figure 5, and an additional window will open as needed.

We learned how to open additional windows inside windows when creating a presentation. It is possible to open windows inside the windows. In the process of creating a presentation, we can include not only textual data, but also tables, multimedia, images, audio, video and other types of data in ready-made templates.

After completing the presentation preparation phase on Prezi.com, we need to use the presentation

we created. As shown in the following window, we select the **Start presentation** item on the upper right side of the window and we can see the presentation (Figure 6).

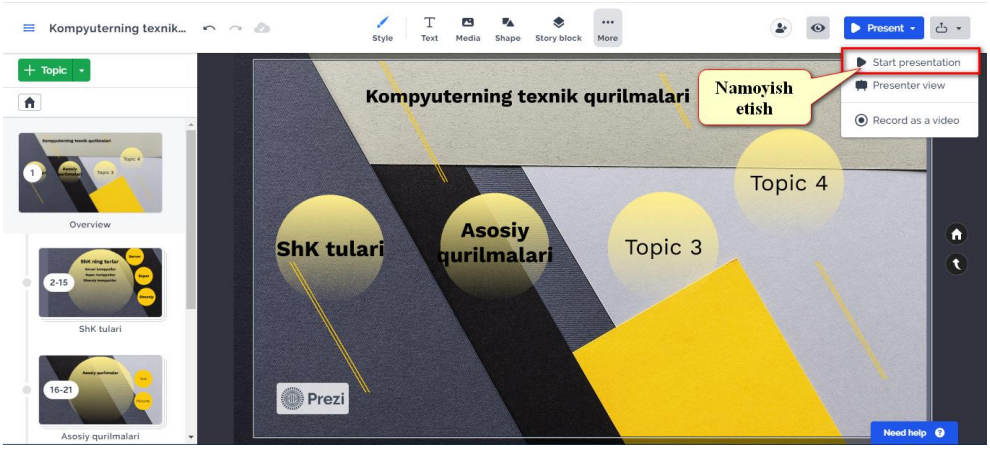

**Figure 28. Presentation process**

We need to save our presentation prepared using ready-made templates on the Prezi.com website and press the **Save** item from the upper side menu of the window or the Ctrl+S keys from the keyboard, as shown in the following window.

Above, we saw how to prepare presentations using ready-made templates on the Prezi program and Prezi.com from modern programs for creating electronic presentations. The Prezi program is a program for creating beautiful online presentations in which presentations are presented sequentially. The main difference between Prezi and Power Point is that Prezi mainly emphasizes the linear format.
