Pedagogical methods in learning english.

Pardayeva Gulsum Erkin qizi[1]

Abstract

In this article today, the main attention is focused on the student, his personality and unique inner world. Therefore, the main goal of a modern teacher is to choose methods and forms of organization of students whose educational activities are optimally compatible with the set goal of personal development. In recent years, the issue of using new information technologies in schools has been raised more and more.

Key words: foreign language, methods, innovative, technology, countries, technological methods.

"President's prize will be established for schools with high performance in foreign languages" - Shavkat Mirziyoyev. In fact, it is the task of us pedagogues to create school lessons and textbooks that can meet the standards of countries recognized by the world through the development of a foreign language. It is good that the students who can speak English are found in the first grade of the school. Especially, the number of students achieving international degrees in a foreign language is increasing day by day. Besides our national university, we are also pleased that more than one student out of seven is a student at one of the world's top 1000 universities. Mastering a foreign language as well as one's own language depends on the skill of the pedagogue. The use of new pedagogical methods is also important and effective. Compared to the traditional lesson, the student's mastery rate is higher in the lesson conducted using new technologies. Below we will talk about the essence of such new pedagogical methods and their practical application.

Today, the ability to know foreign languages is becoming one of the integral parts of professional education. Due to the high rate of cooperation with foreign partners among specialists in various fields, there is a high demand for them to learn the language. In modern society, foreign languages are becoming an important component of professional education. Today, there are large collections of educational materials for people with different levels of language skills. Success in achieving this goal depends on the practical methods and skills of teachers. The ability to use information technologies and modern teaching methods helps to quickly understand new materials. By combining different methods, the teacher is able to solve specific educational programs. The use of several methods of teaching and learning will give effective results. Teaching is carried out in small steps and is based on the student's existing knowledge system. As time progresses, innovations in every field are increasing. Different styles are also emerging in language teaching. A step-by-step approach to teaching English based on the learner's potential, level, and age gives good results. In this case, students are divided into groups based on teaching at the primary level, teaching at the middle level, and teaching at the higher level. A special program is developed by the teacher for each stage.

The task of the teacher is to create conditions for practical mastery of the language for each student, to choose such teaching methods that allow each student to demonstrate his activity and creativity. The task of the teacher is to activate the cognitive activity of the student in the process of teaching foreign languages. Modern pedagogical technologies, such as collaborative learning, project methodology, use of new information technologies, Internet resources, help to implement a person-oriented approach in the educational process, individualize and differentiate teaching, taking into account the abilities of children, their level of learning. provides. Forms of working with computer training programs in foreign language classes include: learning vocabulary; practice pronunciation; teaching dialogic and monologic speech; teaching to write; development of grammatical events.

The possibilities of using Internet resources are huge. The Global Internet provides conditions for students and teachers located in any part of the world to get any necessary information: regional geographical materials, news in the life of young people, articles from newspapers and magazines, etc. It is possible to solve a number of didactic problems using the Internet in English classes: formation of reading skills and qualifications using global network materials; improving the writing ability of schoolchildren; filling students' vocabulary; formation of students' motivation to learn English.In addition, this work aims to explore the possibilities of Internet technologies to expand the horizons of school students, establish and maintain business relationships and contacts with peers in English-speaking countries. Students can take part in online tests, quizzes, contests, Olympiads, correspond with their peers in other countries, chat, videoconference, etc.

In conclusion, it should be said that teaching a modern language is aimed at forming a more cultured person, who has the skills of self-analysis and systematization of new knowledge. Innovative methods are an integral part of the modernization of the entire system. This ensures that teachers can familiarize themselves with the most advanced approaches and then integrate them and use them in their work to achieve significant growth in the education system. Many organizations are moving to a new level by using multimedia capabilities to send and receive information. The use of computers and other devices determines the success of the entire educational process. Sufficient attention should be paid to the formation of speech skills and the development of social flexibility in training sessions. In addition, the success of each lesson in education largely depends on the correct organization of the training. The lesson should be based on the creative cooperation of the teacher and the student. Only then will students be able to think independently and will be educated.
